AMENDMENT AND RESPONSE

Dear Sir:

In response to the Office Action dated March 23, 2001, please amend the above-captioned application as follows:

In the Specification:

Please replace the paragraph beginning at page 2, line 15, with the following rewritten paragraph:

In such a system, one display engine provides video window-timing data, such as video window-timing parameters, which define the size and position of the overlay in the viewing area. The start and ending points of the video window on the screen and other data, known in the art as graphics display data, may be packed by a data packer in the display engine. The other display engine for the other path does not allow for video overlay and thus is without video window-timing information and is simply a graphics data packer and graphics timing provider. As known in the art, a keyer mixes video and graphics data to see which information is overlaid on top of the other information. The output from the keyer is typically the overlaid information, which
